

Fifty-three Angiosperm species (Sapotaceae to Zingiberaceae), which are used by traditional healers in five regions of Eastern Tanzania (Coast, Dar es Salaam, Kilimanjaro, Morogoro and Tanga) are listed. For each species, the botanical name, vernacular name, collection number, locality, habit, geographic distribution and medicinal uses are given. Additionally, information from the literature on medicinal uses, chemical constituents and pharmacological effects are also provided. Data analysis and conclusions to cover all the six parts of the papers previously published are presented.
